## Raybestos Introduces RPT Plated Brake Calipers

*Rust Prevention Technology Provides Best Defense Against the Elements*

**MCHEMRY, III., Feb. 7, 2017** – New Raybestos® Rust Prevention Technology (RPT) Plated Brake Calipers are premium quality, remanufactured calipers that function and fit like OE. A proprietary zinc electroplating process inhibits rust and provides all-weather protection against the elements.

“Raybestos RPT plated calipers are friction ready and engineered for safe, leak-free operation,” said Kristin Grons, marketing manager, Brake Parts Inc. “Strict testing criteria guarantees the calipers provide trouble-free installation and optimal performance in demanding driving conditions such as rain, salt and snow.”

Raybestos plated brake calipers undergo a rigorous remanufacturing process to ensure they not only meet or exceed OE standards, but that they also adhere to global industry standards including SAE J1603, QC/T 592-2013, ASTM B117 and JASO C448. All recovered components are thoroughly cleaned, checked for wear and straightness, and zinc electroplated. The seals, boots, bleeder screws and O-rings are replaced with new materials.

Features include:

- All-weather zinc plating protection, comparable to OE
- Exceptional performance against the ASTM B117 salt spray corrosion resistance standards
- Includes brackets, seals and bleeder screws
- Lubricated to prevent binding
- Factory quality testing processes

For more information about Raybestos plated brake calipers, or the complete line of premium quality Raybestos brake products, including disc pads and shoes, rotors and drums, master cylinders, wheel cylinders, calipers, hoses, cables and hardware, contact a Raybestos sales representative or visit [www.Raybestos.com](http://www.Raybestos.com).

### **About Raybestos Brakes**

Raybestos® has been known as the best in brakes for over 100 years. With a demonstrated commitment to research, development and testing, Raybestos is widely recognized for quality brake components, including friction, rotors, drums, calipers and hydraulic products. The brand was the first to introduce Enhanced Hybrid Technology (EHT®) with its Element3® brake pads, delivering the best attributes of ceramic and semi-metallic for optimal performance, improved pad wear and durability, and increased stopping power during aggressive braking. To learn more, visit [www.Raybestos.com](http://www.Raybestos.com).
